# Residential Electric Shopping Guide

by the  
**Pennsylvania Office of Consumer Advocate**

## *I*ntroduction

Thanks to a new law in Pennsylvania, consumers can now choose the company that provides them with a portion of their electric service. This guide has been prepared by the Pennsylvania Office of Consumer Advocate to help residential consumers make that choice.

The Pennsylvania Office of Consumer Advocate is a state office whose job is to represent Pennsylvania consumers in matters involving their utility services.

It is important to understand that consumers will only have a choice as to a portion of their electricity service. The power lines that run down your street and into your home will still be operated by your local electric distribution company, and the rates for the delivery portion of your service will still be regulated by the Pennsylvania Public Utility Commission.

But Pennsylvania consumers now get to choose the company that sells the electric power, or generation, that is delivered over those distribution lines. Some companies may offer electric generation service that is cheaper than the power sold by your local electric distribution company; some companies may offer types of generation that are cleaner to produce.

No matter who you buy your power from, the reliability and quality of your local electric distribution service will not change. In addition, only companies that are licensed by the Pennsylvania Public Utility Commission are allowed to sell electric generation to consumers in Pennsylvania.

## *H*ow To Shop for Electricity

As a residential electric customer, you should have received a letter that includes a list of electric generation suppliers serving residential consumers in your area. That letter also includes a “price to compare,” which is the price charged by your local utility for the portion of your service open to competition.

The “price to compare” is given in cents per kilowatt-hour (kWh). One way to think about a “kilowatt-hour” is the amount of electricity needed to keep ten 100-watt light bulbs burning for one hour. A typical residential customer may use about 500 kilowatt-hours of electricity every month for normal lighting and appliances. If you have electric heat, you are likely to use much more electricity in the winter months. If you have air conditioning, your usage will likely be higher in the summer months. The best place to find your own monthly usage is by looking at recent

bills you received from your electric distribution company.

Once you know your utility's price to compare and your own typical monthly usage, you can begin to shop for your electric supplier.

Again, all consumers should have received a list of the names and telephone numbers of licensed electric generation suppliers who have indicated an interest in serving residential customers in their area. By comparing the supplier's price per kilowatt hour with your electric distribution company's price to compare, you can find out whether or not you will save money by switching.

For example, as this table shows, if your electric distribution company's price to compare is 5¢ per kWh and the competing electric generation supplier is charging 4¢, then you can save 1¢ on every kilowatt hour that you use. If you use 500 kWh in a month, then you will save \$5.00.

Price to Compare	5¢/kWh
New Supplier Price	- <u>4¢/kWh</u>
Savings	1¢/kWh
<hr/>	
Savings	1¢/kWh
Monthly Use	X <u>500 kWh</u>
Savings per Month	\$5.00

## *How To Use This Guide*

The purpose of this guide is to help residential consumers get started in shopping for their electric supplier.

We have collected information about each of Pennsylvania's major electric distribution companies as well as the electric generation suppliers who are presently offering service to residential customers in each area. We have attached a chart for each company showing the utility company's price to compare, and the comparable price being charged by the electric generation suppliers. We have also calculated the monthly bills for suppliers' services at three different usage levels -- 500 kWh, 1000 kWh, and 2000 kWh per month. If a supplier includes a monthly or annual charge in addition to the price per kilowatt hour, then we have spread that charge over the applicable usage. For example, if a supplier charges \$5.00 per month, plus 5¢ per kWh; and if a consumer uses 500 kWh, then the monthly bill in our chart would be \$30.00.

It is also important to note that we have **not** included other parts of your electric bill in our comparison charts. All customers will **also** have to pay other charges to their electric distribution company to have the power delivered to their home. Those additional charges are the same regardless of

who you buy your power from, however, so that does not change the amount of your monthly savings.

New Supplier Price per kWh	5¢/kWh
Monthly Usage	X <u>500 kWh</u>
Monthly Usage Cost	\$25.00
Monthly Fee	+ <u>\$5.00</u>
Monthly Generation Bill at 500 kWh per month	\$30.00

Our chart points out those electric generation supply services that are certified with a Green-e logo . The Green-e Renewable Electricity Certification Program is a program of the non-profit Center for Resource Solutions. The Green-e program was established to provide information and an objective standard for consumers to compare electricity products, and to verify that consumers get what they pay for. In order to qualify for Green-e certification, the electricity service must use at least 50% renewable energy supply and meet certain other standards. For more information, you can call the Center for Resource Solutions at (888)-63 GREEN, or check their website at [www.green-e.org](http://www.green-e.org).

Finally, our charts only include basic residential and residential heating rates under which the great majority of Pennsylvania residential consumers are served. Some Pennsylvania electric distribution companies also offer special rates that vary based on time of day and by peak usage or that are associated with particular types of service, such as thermal storage or off-peak water heating. If you are currently served under one of these special rates, then you should check with the electric suppliers in your service territory to see if any of them are offering comparable services.

## *Now It's Your Turn*

This document is only a guide to **start** you in the shopping process. We have tried to gather accurate information from all the residential suppliers that we are aware of in each territory, but there may well be additional products available. Also, **prices change**. You should always contact the supplier directly to make sure that you understand the price that you will have to pay as well as all other contract terms, such as the length of the contract and any other fees for switching to or from a particular supplier. Also, each electric distribution company's price to compare may change in the future.

## *Disclaimer of Liability and Endorsement*
